BC151 D2.6.1

31st. May.

Dear Miss Lloyd,

The proper name of the Blaauwbok is

Cephalophus pygmæus;

and the animal is much the smallest of the South-African Antelopes.

Yours very truly

R. Trimen

Cockroach

Blatta sp.

BC151 D2.6.2

Dragonfly

Aeshna sp.

R.C.

9/3/78.

Dear Miss Lloyd

I am sorry to say I
am not very learned in
the names of our flowers
but I have always un-
derstood the name to be
"Spirea" or Iris - my
sister is my authority:
I am just about to paint
the africanda -

Sincerely yr

A E Nielsen

1. Tick? called by Jantje a Jantje is by "Boschluis", owing by no means to be trusted in his determinations. It is a Tick (genus Ixodes)

2. Caterpillar of a Noctuid Moth.

3. cockroach-looking creature
Is a Cockroach (genus Blatta)

4. Smaller Insect with light col'd head (w. two a much lighter yellow parallel) & prominent eyes. said to be found on water

A Carabid Beetle (genus Brachinus)

5. Centipedes: (Scolopendra)

BC151 D2.b.3

South-African Museum,
Cape Town.

23½ May, 1878

Dear Miss Lloyd,

I cannot pretend to be an arachnologist; but, as far as I can make out, your Spider is a member of the genus Misumena of Latreille

If you are coming in this direction, I can shew you a living Spider which would astonish ye. Bosjesman.

Yours very truly

R. Trimen

BC 151 D2.6.4

This Egg is apparently that
of a Gecko Lizard of the
genus Platydactylus.

BC 151 D 2.6.5

South-African Museum,
Cape Town.
23 June 1879

Dear Miss Lloyd,

The Moth enclosed is one of the Arctiidae or Tiger Moths. Its entomological name is Aloa Amasis.

I think that you formerly sent me its very hairy caterpillar.

Yours very truly
R. Trimen

N.B. This kind of Moth is rather widely spread in the Western Districts. To the Eastward & Inland a closely allied species takes its place.

(a. 27 Sept-1879)

BC 151 D2.6.6

South-African Museum,
Cape Town.
27th Sept. 1879

Dear Miss Lloyd,

I take the small beetles to be a sort of Haltica. Do you know if they jumped at all? The true Haltica always jumps nimbly when disturbed.

I hope you are coming to the Meeting on Tuesday Ev.g (temp. 7.45).

yours truly
R. Trimen

BC151 D217

The Mantis is a young female of Mantis religiosa, Linn.

—

Santje's & Piets grubs are of the same species: they are the larvae of a rapacious Beetle Calosoma rugosum.
